Summary

Software developer with 4 years in technology and a focus on applied AI, evaluation, and developer tooling. I build generative AI, RAG, computer vision, and agent systems, then measure how they behave: latency, cost, quality, and reliability. Hands-on with Python, TypeScript/Node.js, AWS, and the Anthropic ecosystem. Open to remote roles with international teams.

Selected Projects

AI Evaluation Platform

Full-stack measurement layer for LLM applications (FastAPI + React, Docker-ready). Supports offline and online evaluation, a mock provider for reproducible runs, and standardized reports covering quality, reliability, safety, latency, tokens, and cost.

AWS-AI-Generative

Generative AI experiments on AWS with Amazon Bedrock, including a RAG implementation used as the "experiment" stage of an evaluate-and-improve workflow.

AI Engineering Lab (TypeScript)

Hub that connects experiments, evaluation reports, and engineering decisions. Focused on benchmarking RAG architectures and keeping measured results clearly separated from illustrative demos.

mcp-advanced-starter (TypeScript)

Advanced Model Context Protocol server demonstrating sampling, elicitation, roots, pagination, structured output, Streamable HTTP, resumability, and OAuth 2.1 + PKCE.

claude-api-starter (Python)

Starter kit for Claude API patterns: prompts, conversation state, streaming, tool use, and agent loops.

robot-vision-dashboard (JavaScript)

Real-time, browser-based perception pipeline: live video, COCO-SSD object detection (TensorFlow.js), lightweight tracking, performance metrics, and simulated robot telemetry in a live dashboard.

Mercado Libre AI Optimizer (Python, Streamlit)

Analyzes seller and Mercado Ads metrics to surface profitability issues and rank products with scale, optimize, or pause recommendations.

intro-deep-learning-starter (Python)

TensorFlow/Keras notebooks on structured data covering overfitting, regularization, and classification metrics, fully executed and published on GitHub.

Technical Skills

Languages: Python, TypeScript, JavaScript, SQL, Bash

AI / ML: Claude / Anthropic API, LLMs, RAG and evaluation, MCP, agents, TensorFlow / Keras, OpenAI Agents SDK

Cloud & infra: AWS (Amazon Bedrock), Docker, FastAPI, GitHub Actions / CI

Frontend: React, Streamlit, TensorFlow.js

Certifications & Courses

- Anthropic Academy: Claude Code, Claude API, and MCP courses (public starter repos on GitHub)
- OpenAI Academy: Agents and Workflows
- Kaggle: Intro to Deep Learning

Languages

Spanish (native) · English (B1, intermediate)
